

Figure 53. Existing Condition: Key Viewpoint 2 is on eastbound TH 97, approximately ¼ mile west of the proposed Project. The trees screen most of the proposed Project area during leaf-off conditions.

Figure 54. Simulation: The proposed Project access entrance as seen from Key Viewpoint 2 would be within the line of sight for motorists traveling eastbound on TH 97. The berm screens views of the site interior, although some operations activities may be partially visible, such as the truck shown partially blocked by the berm in the right side of the simulation.

Reclamation area

Figure 56. Simulation: Visibility of Phase 1 Mining and Phase 2 Reclamation from Key Viewpoint 3 during leaf-off conditions will be limited due to screening from trees, a vegetated berm, and lowering of interior elevation.
