

March 12, 2001

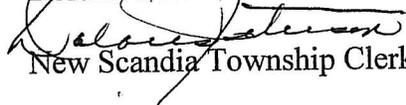

On the above date New Scandia Town Board held an Informational Meeting for the Reconstruction of 185th Street, 188th Street and Norell Avenue. The following Board Members were also present: Chairman, Dennis Seefeldt, Vice Chairman, Paul Rasmussen, Michael Hinz, Kevin Nickelson and John Martineau.

Mr. Tom Peterson, Township Engineer reviewed the plans for the reconstruction and answered questions pertaining to the project. He stated the project would be approximately one mile in length and 22 feet wide. Mr. Peterson had a display of pictures of Rain Gardens that will be planted in approximately 15 drainage areas. The plants will be Native Minnesota Plants.

Mr. John Martineau, Supervisor and Representative of the SCADA/201 System Upgrade Assessment informed the property owners that SCADA is in the process of purchasing land from Schroeder's on the top of 188th Street for a drainfield. The drainfield on 188th Street will be eliminated, so therefore property owners connected to that system should be allowed to connect to the 201 System without a charge.

Property owners expressed their concerns about run-offs, entrances to driveways, wetlands, the water quality of Jellums Bay and reducing the grade of the hill coming from 185th Street. The residents were informed the project should take approximately two months and if they have questions or concerns an inspector from Bonestro would be available during construction or contact the engineer or township office.

Meeting adjourned.

Dolores Peterson

New Scandia Township Clerk
