

Frontier has partnered with the FCC as part of **Connect America Fund Phase II ("CAF 2")** to bring faster broadband speeds to 774,000 homes and businesses in some of the most rural and difficult to serve portions across Frontier's service area.

Scandia residents were part of the CAF2 buildout in MN in 2017; additional areas are tentatively planned for buildout in 2018. New areas under the CAF 2 program are eligible to receive speeds starting at 10 Mbps/1 Mbps and could potentially get speeds up to 115M.

As of January 1, 2018, Frontier has successfully deployed 10 Mbps/1 Mbps broadband to 350,000 CAF 2 eligible homes and businesses across the country, with a commitment to reach all 774,000 homes and businesses by year-end 2020. Faster speeds are now available to hundreds of thousands of additional customers as a result of the CAF2 investments.

Broadband is important to a prosperous rural America, as it enables businesses and consumers to take full advantage of the benefits of internet connectivity including online education, healthcare, vital information resources and entertainment.

"We've hit our stride with the CAF program, and we are excited to continue bringing faster speeds to more communities over the next three years," said Tom Murn, Frontier Local Manager. "The combination of FCC funding and company investment have allowed us to deploy more broadband and improve speeds. Everyone benefits from a more connected rural America."

Residents are encouraged to contact our local retail store located at **12734 1st Ave North, Lindstrom MN** or call **651-213-0007** if interested in learning more about broadband speeds available to their home.
